#### Abstract of JP5245781

**PURPOSE:** To enable a job for maintenance work to be carried out through remote control in keeping both in and out rooms interrupted intact by installing a first plug for uplifting an adjustable suspension scaffold free of lifting motion via a wire, and a second plug being fitted from the second opening installed in a ceiling in the room, closing it, and pulling the scaffold in the horizontal direction as the wire, respectively.

**CONSTITUTION:** A first plug 93 is fitted in a first opening 15 installed in a room ceiling 92 from the outside, filling up this opening 15. Next, an

adjustable suspension scaffold is uplifted via a wire 3. At this time, this scaffold is equipped with a maintenance tool, and maintenance work is carried out by means of remote control. In addition, a second plug 94 is fitted in a second opening 16 installed in this room ceiling 92 from the outside, filling up this opening 16, and this suspension scaffold is pulled in the horizontal direction via the wire 3. With this constitution, the scaffold is approached to an optional maintenance spot in the room, through which the maintenance work can be done through the remote control in keeping both in and out rooms interrupted intact.
